

CREATIONS SOINS®

New pathways for functional skin care

THE INNOVATION COMPANY® offers a complete skin care product range that carries the name Créations Soins®. It is specialized in functional skin care in which each ingredient brings a visual impact, texture improvement and *In Vivo* tested results.

We collaborate with our customers and partners by sharing our know how to create functional products for even the most demanding cosmetic consumers.

What matters most to us is to create innovative products respecting your environment which allows a total satisfaction.

We constantly offer modern and fashionable formulation concepts to maximize the advantages of our ingredients in synergy with others, and we are happy to share this expertise with our customers.

The best choices of our formulations

» Million Micellar Bilberry Lotion "Vintage 2016" (PFI4475CS) is a unique skin care product that combines naturality and efficiency. Nordic Beauty Bilberry Extract hydrates the skin and protects it from premature aging while Fiflow® BB 61 provides a lovely bubbling effect when applied on the face. The skin is fresh, smooth and moisturised. Microcirculation is better with an increase of 77% 5 minutes after application.

» Memory Mask with Pelavie® (PFI5565CS) is a unique aqueous facial mask. Thanks to Hydrasoft® Sea ER HV, it has that particular shape memory rheology, with a bouncy structure. This mask efficiently hydrates and softens the skin, while purifying it with Pelavie® Vert ISO 16128. Hydration increases by 51% 5 minutes after application.

» High Performance Dewrinkles (PFI5673CS) is an ideal skin care product to take care of dry and mature skins. It deeply hydrates (hydration increases by 52% 5 minutes after application), repairs and protects the skin from premature ageing. Indeed, depth is reduced by 77,86% and width by 68,47%, 5 minutes after application.

The Innovation Company® has in-house testing laboratory in the head- quarter in France. Skin Care testing equipment includes *In Vitro* and *In Vivo* measurement devices such as Scanning Electron Microscope, Rheometer, Multiparameter Skin Analyzer, Infrared Camera and Confocal Laser Microscopy.
